**Kill SARS-CoV-2
(COVID-19) &
Norovirus (Gastro) in
30 Seconds.**

Entered into the TGA - ARTG as
a Registered, Hospital Grade
Disinfectant & Sanitiser.

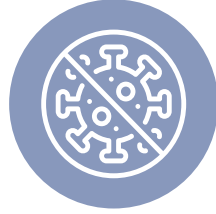

Nanocyn[®]
Disinfectant & Sanitiser

LET'S TALK FACTS

THE WORLD, AS WE KNOW IT, WILL NEVER BE THE SAME AGAIN.

The public has **new expectations**. People want assurances that a business' cleaning practices and products used can guarantee their safety from COVID-19 and other bacteria and viruses. In addition, they want products to be **non-toxic as well as all-natural** and thereby not a danger to their health in other ways, short or long-term.

A solid infection control program will be a **deciding factor** for customers, clients, guests and anyone else when choosing a business to use or frequent. Those businesses which can prove that they have the **highest standards of infection prevention** are going to have a competitive edge. In contrast, businesses that neglect this aspect will never be competitive to the same extent again.

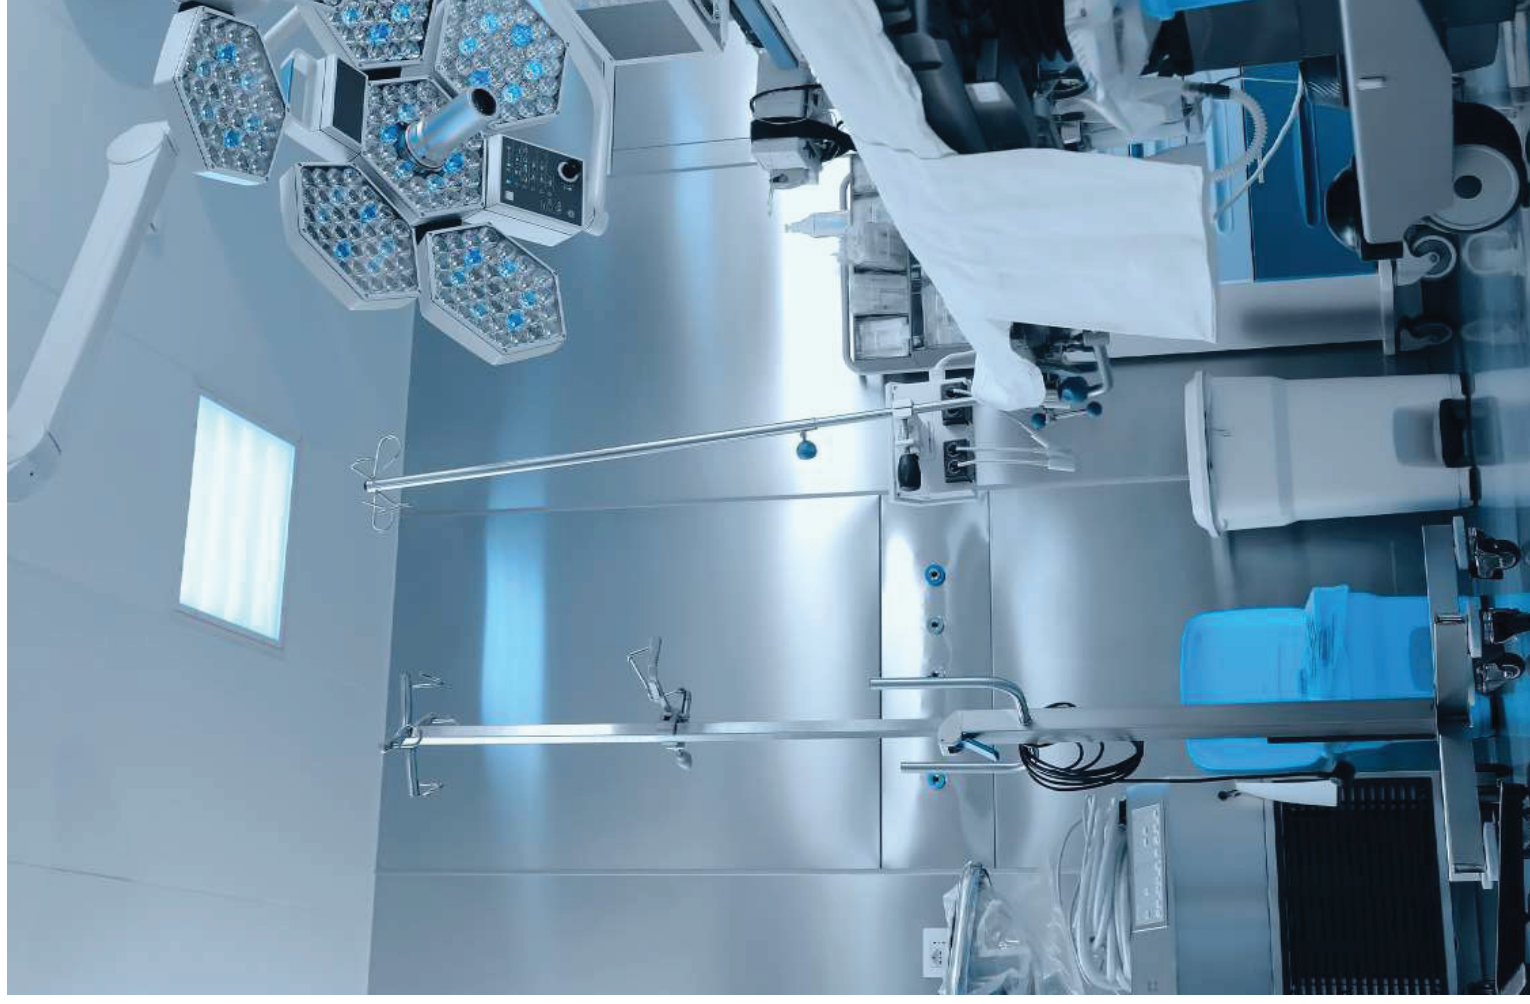

GUARANTEED
SAFETY

NON-TOXIC

HIGHEST
STANDARDS

INFO

CAN YOU GUARANTEE THAT YOUR DISINFECTING PRACTICES AND PRODUCTS WILL HELP YOU FEEL SAFE AND SECURE?

MicroSafe® can help ANY business to balance profitability with public safety expectations. We are able to assist with infection control products that have no match globally and which are setting the standard for decades to come.

Innovative • Reliable • Registered

THERE IS MORE THAN COVID-19 AROUND US.

- **E.coli**
Bloody Diarrhoea And Vomiting
- **MRSA**
Infection, Resistant To Antibiotics
- **Pseudomonas**
Infection to Eyes, Ears, Throat
- **Influenza Viruses**
Influeza And Common Cold
- **Streptococcus**
Strep Throat and Skin Infections
- **Norovirus (Gastro)**
Cause of Gastroenteritis

Nanocyn® kills gram-positive, gram-negative as well as enveloped and non-enveloped viruses in 30 seconds.

Nanocyn®
Disinfectant & Sanitiser

HOW WE COMPARE

MicroSafe® Guarantees:

100% Natural ✓

Nanocyn® can safely be used around people, such as staff and visitors. It has NO hazards on the label, requires NO safety equipment, is pH-Neutral, 100% Biodegradable, and poses NO risk to the environment. Nanocyn® is GECA certified.

20 Years Experience ✓

The MicroSafe® Group has been a global leader in infection control for almost two decades. We were heavily involved in previous pandemics such as SARS, MERS and Ebola, providing cutting edge technology which is safe for people yet deadly for pathogens.

Quick to Apply ✓

Our technology is the only one in the world able to disinfect an entire standard room in under **2 minutes**, instantly creating a hospital-grade environment without residues that might be dangerous to people and materials in the longterm.

Inferior Disinfecting Products Are:

Unsafe

Toxic chemicals used in most products (such as **quaternary ammonium** compounds, hydrogen peroxide and alcohols) often leave toxic residues behind. This limits when and where they can be used, also the number of safety precautions staff must take.

Impractical

The perfect solution should not take much additional time or precautions. **An effective product needs to be fast-acting and easy to use. Who has time to wait for 3, or even 10 minutes to disinfect a surface? 30 seconds contact time is the standard.**

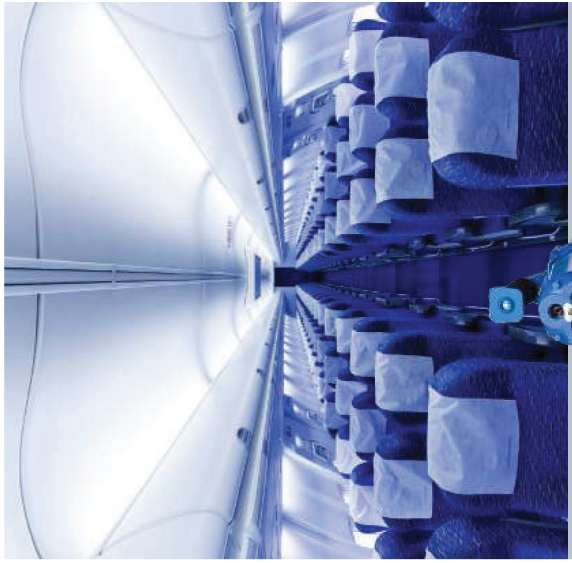

Ineffective

Products that have claims which are not supported by the TGA like “30-Day protection against Viruses” often do so without the support of credible institutions and the scientific community. **The right product should have hard proof supporting its claims, be government registered and verified.**

The Nanocyn® Disinfectant & Sanitiser meets and exceeds numerous aviation standards such as Airbus, Boeing & AMS

Airbus, Boeing & AMS Certifications			
Sandwich Corrosion Test	PASS	Immersion Corrosion Test	PASS
Rubber Test	PASS	Sealant Test	PASS
Painted Surface Test	PASS	Tedlar Surface Test	PASS

All detailed test results available on request.

The most advanced material testing available globally, ensuring your OH&S and compliance departments are happy, too.

GECA
CERTIFIED

We are proud to be **GECA** Certified. Nanocyn® is the only **GECA** certified product in Australia of its kind that also has TGA approval as a hospital grade disinfectant effective against SARS-CoV-2 (COVID-19) in 30 seconds.

KEY PRODUCTS

Microsafe® Fumigation Machine

Our most used machine worldwide. Thousands of units are used on a daily basis across the globe.

Key features:

- Ideal for disinfecting large areas
- Able to cover vast areas quickly
- Simple operation
- Disperses 5-micron size droplets
- Holds up to 4 litres
- Made in the USA

Fumigation, The Key Difference.

By applying Nanocyn® via fumigation, you are not only eliminating viruses and bacteria from all hard surfaces but odours that are airborne as well. You can only fumigate indoors with a product that is approved and which has achieved the highest material safety standards in the world, including solid third party eco-credentials.

Air Drying - No Wiping.

Fumigation offers complete protection quickly. The targeted area is covered with a very fine mist of 5-micron size droplets. These droplets rapidly air-dry, eliminating the need for hand wiping. This is why you can only fumigate Nanocyn® - A 30-second contact time ensures the best possible outcome - every time.

Nanocyn® Spray Bottles & Spray

All bottles come ready to use, require no dilution and have zero hazards on the label.

Available sizes:

- 120ml
- 500ml
- 990ml
- 5L

Our technology is approved and registered with all major governments around the world including, the US, Europe, Canada, Japan and many others.

Where Nanocyn® is used:

- World-Renowned Global Airlines
- General Healthcare Facilities
- World-Renowned Hospitals
- Global Hotel Chains
- Dental Practices
- Day Surgeries
- Cancer Centres
- Aged Care Homes
- Childcare Facilities
- Airports & Cruise Terminals
- First Response Teams
- Professional Sport Teams
