Attn: To Whom It May Concern
Re: RFDS / Microsafe & Nanocyn

Dear Sir / Madam,

The RFDS has been working with Microsafe Care Australia since before the COVID-19 pandemic. The Nanocyn product that Microsafe offers solves several problems for us in our unique and challenging environment. Our number one priority for both staff and patients is safety at the core of everything we do. This extends to the disinfectants that we are using, which need to be effective against a wide range of pathogens such as bacteria, viruses, spores, and fungi while being completely safe for our aircraft, medical equipment, staff, and people in our care.

The Nanocyn product ticks all of our boxes. We have been fumigating our aircraft daily to stop the risk associated with Noroviruses, MRSA, C-Diff, and, more recently, SARS-CoV-2 that causes COVID-19. The fact that Nanocyn is TGA approved to kill viruses in 30 seconds without containing any quaternary ammonia compounds is a key performance indicator for our clinicians and our aircraft maintenance department, who is always extremely concerned about corrosion on our aircraft.

Nanocyn has played an integral part in providing a Covid-Safe environment when an aircraft is deployed into indigenous communities in QLD. COVID-19 is a major concern, especially for indigenous communities, including the Torres Strait Islands. Being able to use an alcohol-free and safe product in the communities ensures more frequent visits from the RFDS for general GP services throughout the pandemic.

Please feel free to contact me if you require further information.

Thank you.

Kind regards
