

# Arid Enviroclean Water Saving System

Today, Australia faces a great challenge, in managing a resource we have always taken for granted –our water reserves. Intensive investigation is being carried out by both Government and Industry into the ways we capture, store, use and finally dispose of this important asset. With this in mind, True Blue Chemicals has for the five years carried out a major research and development program to reduce the amount of water consumed by industry in various cleaning applications e.g. laundry-40% saving, house keeping -90% saving and now urinal water saving and cleaning .

## INTRODUCING THE ARID SYSTEM

**Arid Enviroclean System is a total solution to cleaning, sanitizing and deodorizing urinals while at the same time delivering savings of up to 99% of the water that would normally be flushed away. The Arid Enviroclean System is a simple to use process.**

1. Turn feed water off to the urinal,
2. Deep clean entire urinal and drain with Arid Cleaner neat, this removes uric acid and water hardness encrustations and lowers the population of malodor causing germs.
3. Place Arid Enviroclean tablets in urinal, 1per singular trough, in multi troughs systems place every 3 to 4 spaces.
4. Clean once or twice daily depending on the amount of traffic with a 1part in 40 water solution of Arid cleaner – apply through watering can foam brush over entire surface of urinal, leave on do not rinse.
5. Once a week repeat step number 2.

## How does the system work?

Arid Enviroclean System works by combining a highly effective deodorising, sanitizing, conditioning and cleaning agent with a concentrated biodegradable tablet designed to dissolve with water and urine and wash down the drain. Most odours come from the drain, the 3-way cleaning & deodorising action provides a heavy duty cleaner to emulsify soilage, a long-term deodoriser which masks, absorbs & neutralises malodours and an enzyme to safeguard against uric acid encrustations.

# Arid Enviroclean Water Saving System

## Arid Enviroclean Cleaner

Has been developed with a buffed organic biodegradable acid system with special penetrating emulsifiers, germ fighters, deodorise and conditioning agent that coat the urinal's surface with a protective shield that prevent uric acid and germ films forming preventing malodour at its source.

## Arid Enviroclean Tablets

Are a slow release biodegradable tablet designed to dissolve and slowly wash down the urinal. Most odours come from the drain and the urinal's surface Arid Enviroclean Tablets keep these areas clean and odour free. Arid Enviroclean Tablets' patented formula provides - excellent deodorising using organic natural fragrances with strong odour absorbers- prevents bio films forming utilizing special enzymes that target uric acid and purifying bacteria -shields the urinal surface stopping incrustations forming by applying a biodegradable monomolecular layer that stops soil anchoring to the surface.

<b>Specifications</b>	
<b>Colour</b>	pink
<b>Odour</b>	Floral, / Alpine
<b>Hard Water Tolerance</b>	Excellent
<b>Risibility</b>	Yes
<b>Flammability</b>	Non-flammable
<b>Biodegradability</b>	Fully
